Gold Country Computer Learning Center

Location: 11350 McCourtney Rd, Grass Valley, CA 95949 (Gate 2 at the Fairgrounds)

Phone: (530)273-3029 • Fax: (408)762-3823 • www.gcclc.org • info.1@gcclc.org

Introduction

The Gold Country Computer Learning Center is a 501(c)(3) non-profit organization, managed and completely run by over 70 volunteers who contribute over 5,500 hours per year to the Center's educational operation. There are currently 8 directors, who are also the key individuals that manage the day-to-day activities of the center.

We offer over 17 different computer classes and our typical schedule provides over 26 classes, three times a year, providing tuition to over 600 students per year. In addition to these regular classes, 6 to 10 Workshops on specific subjects are provided each semester along with a Seminar and User Group meeting scheduled once per month.

Mission Statement:

"The Gold Country Computer Learning Center, an all volunteer organization, provides quality instruction in the use of computers to the Nevada County community. Special support is given to new computer users to develop their skills, thus enabling participation in more advanced classes."

What we do:

Provide a friendly, enthusiastic environment where students can learn to use computers and share computing experiences. We help to build a community of computer literate adults who are able to manage information and graphics, use e-mail, and experience the World Wide Web (Internet).

How we do it:

We believe in "learning by doing." There is one computer per student. A student manual and appropriate software are provided for each course. Our all-volunteer training teams consist of instructors, who lead the courses, and coaches who work with the students to ensure they successfully complete each lesson. We do our best to accommodate any student's special needs.

Our Goals:

- To continue to build and maintain a sustainable organization. Sustainable both financially and with sufficient volunteers.
- To be a service to our community and to be recognized as a community resource.
- To grow, but to limit that growth to what can be assimilated and sustained.

Target Markets:

- "New to computer" users.
- People going back into the workplace. This is often a "stay at home" parent now looking to return to work and needing to enhance their computer skills.
- Low-income "new to computer" users. Our low cost tuition provides a much lower cost alternative to the local Jr. College. We also assist low income users by providing refurbished computers at no charge.
- Baby boomers who have only specialized workplace skills, often in a specific application or limited set of tasks that now need to broaden their computer skills.
- Digital photography users. Most people are buying digital cameras and would like to understand how to do basic editing to significantly enhance the enjoyment of their photos.
- People who want to stay abreast of new technology. Technology changes occur rapidly and with significant impact. We view as a part of our job helping seniors and others learn and adapt to new technology that we can't even envision yet.
