

Hard Disk Backup Strategies and Techniques Workshop

Tuesday, July 20, 2010 9:00 - 11:00 Cost \$10

The truth is, hard drives do fail.

**Your data is valuable.
Can you risk losing it?**

In this workshop, you will learn:

- the difference between your personal data and “data” that supports the operating system
- why each needs to be backed up separately
- the techniques and tools that work

We'll talk about partitioning your hard disk to make backups manageable. We will review and demonstrate software tools, such as Windows Explorer, Syncback, R-Drive, and Macrium Image.

**Join us to learn about these best practices
to help make a disk recovery easier.**

Presented by Jim March

**Gold Country Computer Learning Center
Nevada County Fairgrounds Gate 2
Grass Valley, CA**
